

F9 -- abort rate by policy x cube_size

*D16/D17: abort = protective stop / RTDE error / mocap loss / hang watchdog
(real robot only -- sim never aborts). 4cm is OOD (hatched, outside the
trained cube_size DR range, D17); a high 4cm abort rate is an expected,
reportable finding, not a bug.*

policy checkpoints (median-seed selection, robots/UR3e/gap_protocol_policy_map.json):
